Dockerfile

Pull Apache httpd image

```
FROM httpd:latest
# Define maintainer
LABEL maintainer="deArruda Lucas"
# Copy html files to container directory
COPY ./html/ /usr/local/apache2/htdocs/
# Add permission to directory
RUN chmod -R 755 /usr/local/apache2/htdocs/
# Create directory to be mapped
RUN mkdir -p /var/html/
# Map directory
VOLUME /var/html/
# Add permission to directory
RUN chmod -R 755 /var/html/
```

Docker Playground

Arrastar arquivo dockerfile para pasta

$ mkdir ./html/

$ cd ./html/

Arrastar arquivos html para pasta

$ cd

$ chmod -R 755 ./html/

$ docker build -t htmldockerimg .

$ docker run -dit --name htmldocker -p 32000:80 -v ./html/:/var/html/ htmldockerimg

Clicar na porta 32000

$ cd ./html/

Arrastar arquivos modificados para pasta

$ cd

$ chmod -R 755 ./html/ ou dentro da pasta ./html/ dar $ chmod 755 dockerfile.html

$ docker exec -it htmldocker cp -r -v /var/html/. /usr/local/apache2/htdocs/
